Use Cases - Admin Dashboard

Use Cases - Customer Dashboard

Use Cases - User Authentication

User Stories - Customer

“As a customer I want to have an account with the salon so that I can access my own information that is unique to me.”

“As a customer I want to be able to create, edit, and cancel appointments online so that I can schedule a haircut without having to call or physically come into the salon.”

“As a customer I want to be able to view my points so that I know many more points I need before I can redeem them for free perks.”

“As a customer I want to be able to redeem my points for free perks so that I can keep coming back and be rewarded for my loyalty to the salon.”

User Stories - Stylist

“As a stylist, I want to be able to check my schedule so I know if I have any appointments ahead of time.”

“As a stylist, I want to be able to see past appointment information so that I can see what kind of haircut the customer got the last time they came in.”

“As a stylist, I want to request time off using my available paid time off so that I can schedule time away from work without conflicting with my appointments.”

CRC Cards - User

User Variables

-accountNumber: string	User ID
-role: string	Role determines how a user will interact with the system
-firstName: string	User's first name
-lastName: string	User's last name
-phoneNumber: string	User's phone number
-username: string	User's login username
-password: string	User's login password
-emailAddress: string	User's email address

User Methods

+User(role:string, firstname:string, lastname:string, phone number:string, username:string, password:string)	Constructor- Creates User with all needed attributes
~User()	Destructor
+getName(): string	Retrieve's user's name
+setName(firstname: string, lastname:string)	Sets a user's full name
+updatePassword(password: string)	Update user's password
+changeRole(role: string)	Change user's role
+updatePhoneNumber(phoneNumber: string)	Update user's phone number

+updateEmailAddress(emailAddress: string)	Update user's email address
---	-----------------------------

CRC Cards - Appointments

Fields	
time: obj	Specified time for the appointment
customerId: string	Customer ID
stylistId: string	Stylist ID
apptId: string	Appointment ID

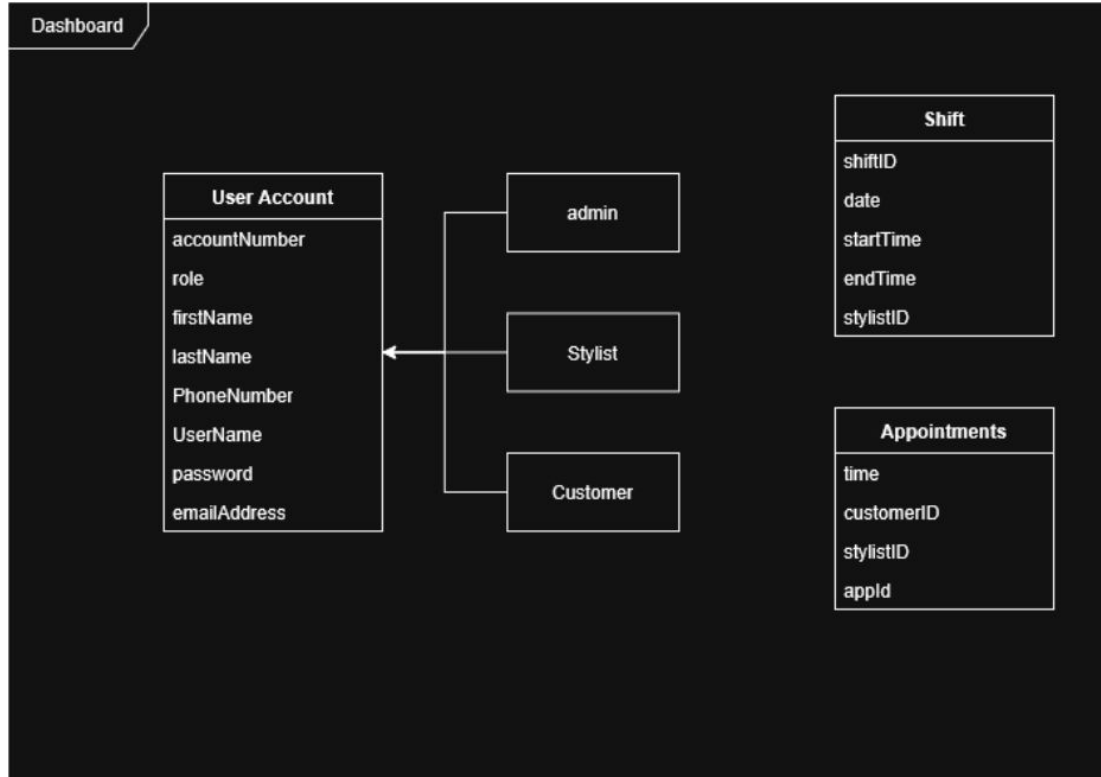

Methods	
getTime() / setTime()	Gets or sets the time of the appointment
getAId() / setAId()	Gets or sets the appointment ID
getCId() / setCId()	Gets or sets the customer ID
getSId() / setSId()	Gets or sets the Stylist ID
addAppt(apptId)	Adds a new appointment
cancelAppt(apptId)	Removes appointment

CRC Cards - Shift

Fields	
shiftID(string)	
date	
startTime	
endTime	
stylistID(string)	

Methods	
assignStylist()	
createShift()	Creates a new shift.
deleteShift()	Removes a selected shift.
getshiftHours()	

UML Diagrams

Classes

Components	Models	Services
Appointment Class	Customer Class Stylist Class User Class	AppointmentController AppointmentServices UserController UserService

Appointment Class

- Represents an appointment a customer has with a hair stylist
- This class provides basic functionality and stores data on appointments created

Customer Class

- Represents a user who is of type customer
- This class is a child of the User class. It represents and provides specific functionality for Users with the role of Customer

Stylist Class

- Represents a user who is of type stylist
- This class is a child of the User class. It represents and provides specific functionality for Users with the role of Stylist

User Class

- Represents a person interacting with the system
- This class provides basic functionality and stores data on users for the system

Appointment Controller Class

- The interface for users to manage appointments.
- Customers can create/view/cancel/update appointments.
- Stylists can view appointments that they will have for any work day.

Appointment Services Class

- Provides functionality pertaining to the creation, reading, updating, and deletion of appointments

User Controller Class

- This class provides console-based interaction for creating, updating, viewing, and deleting users in the system
- showMenu()- Displays the main user management menu and routes to the appropriate action
- createUser()- Prompts the admin to enter details for a new user and creates them based on the selected role (Customer or Stylist)
- viewUser()- Prompts the admin to select a user and displays their details
- updateUser()- Prompts the admin to select a user and update their details
- deleteUser()- Prompts the admin to select a user and delete them
- selectUser()- Displays a list of all users and prompts the admin to select one
-

User Services Class

- Provides functionality pertaining to the creation, reading, updating, and deletion of users.
